

About the designer of Specwog Warrior Tactical Combat Knife:

Born 1965, in Zagreb, Republic of Croatia, Dean Rostohar has been practicing Martial arts for more than 35 years, achieving the master level in many of them. He has been studying and practicing the art of fighting with the knife for 30 years. As a member of respectable Croatian

Special Force Unit, SJP "Alfa" he was actively involved in the defense of the Republic of Croatia during Croatian Homeland War, performing various military and police combat assignments. He is a decorated War veteran, who has been awarded with numerous medals and awards, both for his professional achievements and for the merits shown during the Croatian Homeland War. In addition to his military and police duties, Dean Rostohar also served as the Warrior Arts and Close Combat instructor for the Special Police and Army units. For last 25 years Rostohar has been studying and practicing the Warrior Art of Bujinkan Ninjutsu and achieved the highest ranking, being awarded the rank of Shihan. He is the master teacher and school headmaster (Shibu Cho) for Bujinkan Ninjutsu in Croatia. Well known for his Shinken Gata ('the real fight') manner of fighting, derived from his real combat experience, Dean Rostohar has been holding numerous Warrior Arts and Ninjutsu seminars and courses all over the world.

About Specwog:

In order to continue studying military and police Warrior arts, Dean Rostohar has founded "Specwog®" (Special Warrior Operation Group). He has organized and designed the Tactical Technic Combat System - T.T.C.S. (Croatian: Taktičko Tehnički Borbeni Sistem - T.T.B.S.), teaching

the various Warrior skills in a distinctive manner. Among the skills taught via Tactical Technical Combat System - TTCS are the following: empty hand fight (hand to hand combat), tactics and fighting with firearms, the tactics and fighting with blade weapons, improvised weapons and other combat tactics and skills.

About FOX Cutlery:

FOX CUTLERY (FKMD), is Italian company, founded in 1977 by Oreste and Valnea Frati. FKMD is one of the leading manufacturers of knives in Italy, offering quality products for both civilian and military markets, in Europe and overseas. In 2005 FKMD introduced the Fox Knives Military Division brand, mainly focused on military markets, which is currently managed by Gabriele Frati. The company is ISO 9000:9001 certificated and recognized by NATO as an official supplier of N/CAGE CODE: AG180. FKMD is looking for partners interested to introduce and develop various products for the military and law enforcement market.

The FKMD Company and Dean Rostohar thank you for choosing and purchasing this excellent knife!

About Specwog Warrior Tactical Combat Knife:

Idea of Specwog tactical combat knife originated from studying the distinctive manner and techniques of fighting used in Dean Rostohar's Tactical Technical Combat System - T.T.C.S. (T.T.B.S.). A need for a knife having special, distinctive form emerged. Dean Rostohar decided to design the knife that brings the best results in combat situations.

Specwog Warrior Combat Knife is a weapon intended for the police and army special units (Special Forces), i.e. for those who use the knife daily, in the tactical combat situations.

It is the 'all-function-knife' - a multi-purposive or multi-functional knife. As a combat knife, Specwog Warrior Combat Knife is designed for the techniques of fighting against an attacker, on land and at sea. As a tactical knife, it is designed for cutting ropes, opening the doors, windows, cans, etc. It can be used as a survival knife, a tool for peeling the animal skin, cutting the meat, fruits and vegetables, cleaning the fish, cutting wood, etc.

Specwog Warrior Combat Knife has a semicircular shape, enabling cutting and slashing with a large striking force. Spear-shaped pointed tip of the knife in the

middle of the blade gives a large thrusting power - superb penetration in puncturing and stabbing. The knife's distinctive tooth enables deeper penetration and cutting with the blade. A teeth-shaped part at the back part of the blade prevents the knife slipping during the techniques with the back of a knife. The knife closely and firmly adheres to the surface. The cutting blade is always in the horizontal position when the knife is swung for slashing. Regardless if the knife is being held with the 'forward grip' or with 'the reverse grip', the top of the knife is always straight and pointed forward. A broadly shaped blade allows powerful stabs, cuts and slashes without the excessive use of force. The distinctively shaped handle has two holes for the leash. It is ergonomically designed to avoid unnecessarily pressure and straining to the wrist. The handle, with the protector part, allows the firm grasp and prevents the knife slipping out of the hand. The back of the knife handle is slightly curved; triangular, to make striking of the specific body points easier. It can also be efficiently used for breaking glass.

Knife Specifications:

Blades:

Cobalt Vanadium stainless steel N690Co HRC 58-60, long mm 255 - thick mm 6.

Handles:

CNC machined G10 coarse textured, well contoured, creating a smooth surface with a very high grip. Resistant to corrosion, salt and acid, can be used in wet surroundings. Total length of the handle is mm 135. Black.

Blade Coating:

Blade is coated by DLC process, creating a special coating that makes outside blade very hard and resistant to salt and corrosion, increasing the outside hardening to HRC 72-75. This process was developed for giving the knives the features and very powerful performances of the high-speed tool and making them resistant to abrasions.

Sheaths:

Made from US Kydex, with backside clips allowing use of the knives in different positions on the combat belt. At the backside of the sheath there are the MOLLE systems loops, giving the possibility of attaching it to any combat jacket, vest or backpack that fits that system.

size: 1:1
